

TSSadmin Express™

Productivity Enhancement for CA-Top Secret Administrators

TSSadmin Express™ boosts your productivity and increases the accuracy of the work you do with eTrust CA-Top Secret® z/OS (TSS). It removes rote, day-to-day busy work by transforming the archaic *DOS-like* native TSS command interface into a powerhouse of intelligent automated processes expressly designed for TSS administration. The result? You'll be better able to **meet service levels and provide faster and more accurate security administration to your customers.**

TSSadmin Express™ is built and maintained by people who have been in your shoes – every function available is specifically targeted to real-world day-to-day TSS administration tasks. A simple press of a button launches and automates complex workflow processes. These processes are designed specifically to work in harmony to help improve the effectiveness of your TSS administration.

If you can increase administration your productivity by 100%, you can shift time from doing manual administration to more corporate critical tasks. If it takes an administrator 30 minutes today to process a security request, only 15 minutes will be needed (probably even less) using **TSSadmin Express™**. Taking this a step further, if you have 3 TSS administrators and you can double their productivity, that's like adding three additional people to your staff!

The implementation is easy too! No IPL. No authorized libraries. Runs in any Z/OS environment and uses only standard TSO and ISPF facilities. You'll be up and running in less than one hour!

So, how does it work?

There are 5 categories of features available to you with **TSSadmin Express™**:

AC Power Button™
SMART Output Commands™
SNAP Navigation Commands™
HIPER-ADMIN Commands™
HIPER-EDIT Commands™

AC Power Button™

Also known as the *Administrator's Companion*, this feature virtually eliminates keying of data for common TSS administration functions. Simply pressing this button launches context-sensitive processes ranging from simple TSS commands to complex multi-step automated workflows. In either case you get instant and accurate results. We bet you can't use the *AC Power Button™* without smiling! Whenever you are viewing or editing data, just click on the target and press the *AC Power Button™* ... **TSSadmin Express™** intuitively knows what you need to do and it does it – instantly and accurately.

SMART OUTPUT Commands™

These commands *instantly* invoke communication with TSS and other system services to generate two-way reusable output. Coupled with use of the *AC Power Button™*, output from one function is automatically and intuitively re-used for input to the next function, often with no need to re-key any data! Gone are the days of

copying and pasting data to generate the next command – now simply point to the item on the display and press the AC Power Button. Presto! Further, you can launch these functions from *any* ISPF panel. Smart Output™ uses the ISPF VIEW service to provide unmatched efficiency.

SNAP Navigation Commands™

These commands “SNAP” to right where you need to go, and then quickly and safely return when complete so you can resume your work right where you left off. There’s no need to abandon what’s on your current display simply because you need to check on something elsewhere in ISPF. **TSSadmin Express™** enables you to instantly jump to an alternate function even if you are in the midst of reviewing TSS output. Your current display is simply set aside, awaiting your return so that you may resume your work.

HIPER-ADMIN Commands™

These **High-Performance Administration** commands perform dozens – often hundreds or thousands -- of automated processes for you to quickly and accurately reach the desired result. These commands generate reports, generate TSS commands, and replicate permissions/profiles/users, and many others. No matter what the task, you can be confident that **TSSadmin Express™** will do the lion’s share of the work for you with lightning speed and tremendous accuracy.

HIPER-EDIT Commands™

These **High-Performance Edit** macros were developed by a TSS administrator specifically for performing TSS administration. These launch advanced functions to help you organize and summarize vast amounts of TSS data. Whether it’s extracting a list of ACID’s or even sorting and summarizing data you can be sure that **TSSadmin Express™** will provide your results quickly and accurately.

Let us show you how TSSadmin Express™ can improve the productivity of your staff and the service to your clients!! Call 703-825-1202 or visit our website at www.infosecinc.com now for a free 30 day trial!!
