

INFOSEC LAUNCHES PROFESSIONAL SERVICE UNIT (PSU) PROGRAM

Centreville, VA, May 16, 2008 – InfoSec, Inc. today announced the formal launch of the Professional Service Unit (PSU) Program which provides mainframe clients with the flexibility to acquire service hours to be used when needed over the period of twelve months. The program is designed to give mainframe customers the flexibility to have expert mainframe staff on an as-needed basis when on-site support is required.

“We all know that things happen unexpectedly. Projects can be dictated from upper management, audits take place or there’s a sudden backlog of work. When these situations occur it is sometimes difficult to find the budget dollars needed to bring in an expert, especially in these budget trying times”, said Robert Fake, President of InfoSec. “The PSU program allows our clients to purchase service hours up front and at discounted rates, when budget dollars are available and use those PSU’s later for these unexpected projects or those that are planned for later in the year.”

The PSU Program is available for all mainframe areas including Security Services, Database Services, Systems Services, Training Services and more.

To learn more about the PSU program or purchase PSU’s, please call us at 703-825-1202 or go to www.infosecinc.com to download a PSU Agreement.
