

INFOSEC TO HIGHLIGHT TSSADMIN EXPRESS™, MAINFRAME SERVICES AT CA WORLD 2010

CA WORLD, LAS VEGAS, NV May 17th, 2010 – InfoSec, Inc. today announced that it will be highlighting the very successful **TSSadmin Express**™ productivity tool which supports CA Top Secret® z/OS (TSS) mainframe security technology and their wide array of mainframe services. CA World 2010 attendees stopping by booth #276 in the Exhibition Hall will have the opportunity to see demonstrations of **TSSadmin Express**™ and talk with the InfoSec management team about service offerings.

“The development of **TSSadmin Express**™ and our vast catalog of mainframe services comes from many years of providing services to CA Top Secret clients, CA Technologies and mainframe customers”, said Robert Fake, President of InfoSec. “InfoSec’s expertise in mainframe technology, particularly CA Top Secret and our understanding of how CA Top Secret security is typically administered creates a win-win scenario for InfoSec, CA Technologies and our customers.”

“CA Technologies’ customers are looking for ways to increase productivity and simplify management of their CA Top-Secret environments while continuing to provide comprehensive security,” said Mark Combs, distinguished senior vice president in CA Technologies’ Mainframe Business Unit. “InfoSec’s TSSadmin Express solution and their highly skilled consulting resources provides them with an excellent means of achieving this important objective.”

TSSadmin Express™ boosts productivity and increases the accuracy of the work performed to administer TSS. It eliminates the routine day-to-day tasks by transforming the native TSS command interface into a powerhouse of intelligent automated processes and analysis capabilities expressly designed for TSS administration. This results in clients who are better able to meet service levels and provide faster and more accurate security administration to their customers.

InfoSec also provides high-quality consulting services and software to mainframe customers resulting in increased operational efficiencies, improved compliance and decreased costs. These factors help clients to leverage their mainframe investment.

“We’ve been involved with mainframes since 1978 and know that they are not going away like many originally believed. With most of the world’s business data still processed on a mainframe, our services are designed to support our customers who rely on their mainframe and assist them in continuing to leverage that investment” continued Fake.
