

## **INFOSEC LAUNCHES SERVICE RETAINER PROGRAM**

Centreville, VA, July 18, 2007 – InfoSec, Inc. today announced the formal launch of the Service Retainer Program (SRP), which provides mainframe clients with on-demand mainframe expertise. The program is designed to give mainframe customers the flexibility to have expert mainframe staff available if needed without having to incur the expense of a full time employee.

“As much as the demise of the mainframe has been touted for years, we all know that 70+ percent of all mission critical data still resides on the mainframe and that the mainframe still provides the best platform for high-performance, high-availability computing”, said Robert Fake, President of InfoSec. “We also know that the mainframe skill set is dwindling and that these skills are crucial to the ongoing operation of the business. The Service Retainer Program allows our clients to have ready access to these highly skilled resources without the cost of a full time employee.”

“We use the InfoSec, Inc. Service Retainer Program and have found it to be a reliable, high-quality service”, stated Jack Pierce, Manager of Mainframe Technical Support at Airline Reporting Corporation.

The Service Retainer Program is available for all mainframe areas including Security, Performance Management, Workload Management, Output Management and more. Depending on client needs, the SRP can be tailored to meet client requirements.
