

IDAHO STATE CONTROLLER'S OFFICE GETS BIG RETURN ON TSSADMIN EXPRESS INVESTMENT

Centreville, VA, December 1, 2008 – InfoSec, Inc. today announced that State of Idaho Controller's Office is reporting tremendous productivity gains after acquiring InfoSec's **TSSadmin Express™** CA Top Secret productivity tool. TSSadmin Express boosts productivity and increases the accuracy of the work performed with CA Top Secret® z/OS (TSS). It eliminates the day-to-day busy work by transforming the *DOS-like* native TSO command interface into a powerhouse of intelligent automated processes and analysis capabilities expressly designed for TSS administration. This results in clients who are better able to meet service levels and provide faster and more accurate security administration to their customers.

"It was good to see the InfoSec folks at the CA World Conference because it gave me the opportunity to let them know what a great product TSSadmin Express is and how much easier it has made my job. Now I actually have more time to do the analyst part of the job. As the only mainframe security officer in my office, managing over 4000 User IDs, I can now easily create, compare, find out who has a resource, and manage resources quickly on-line without those famous type-o errors. I love the fact that when I delete User IDs they are stored in a file and can be restored if needed. Also, the capability to view on-line security changes quickly without running a batch report has saved my bacon more than once! So Thanks again for such a wonderful product and the great tech support I have received." stated Faye Jett, Systems Security Analyst of the Idaho State Controller's Office.

"The feedback from our many TSSadmin Express clients to date is tremendous", said Robert Fake, President of InfoSec. "When our customers can do the same work in 5 minutes that used to take them 30 hours, or 8 hours instead of 6 ½ days, that's exciting to hear. And the numbers I just mentioned are real numbers from our clients."

"InfoSec's expertise in CA-Top Secret, understanding of how CA-Top Secret security is typically done and relationship with CA, creates a win-win-win scenario for InfoSec, CA and our mutual customers." says Fake.

InfoSec has been a premier service partner of CA since 1998, focusing primarily on CA mainframe security services and is also an authorized reseller of CA's world-class mainframe products. InfoSec also provides professional services around the above technologies, as well as other CA mainframe software products and IBM operating system software. These include installation, implementation, upgrades, performance and tuning and assessment of mainframe technology.
