InfoSec Sniffs Out Security Risks

October 25, 2011 (Centreville, VA) – Premiere [mainframe services](#) provider, InfoSec Inc., has signed a partnership agreement with Xbridge Systems to market and utilize DataSniff, the most comprehensive data discovery tool in the Data Loss Prevention (DLP) market today.

“There are 2 issues here. One is that most customers know where their sensitive data, such as Social Security Numbers or Credit Card numbers, are stored but the data may be visible in clear text.” says Bob Fake, President & CEO of InfoSec, Inc. “The second issue is where customers don’t know what they don’t know. In other words, they have sensitive data stored in locations that they are not aware of and in clear text. They think their data is protected, but it’s not”

DataSniff allows the user to look for a series of characters in their data (i.e., 9-digits – that would be a SSN; or 15 or 16-digits – these would be credit card account numbers) and determine if they are or are not encrypted.

“By leveraging this unique technology as part of our [Audit and Compliance](#) service, we can assist customers in discovering where their sensitive data may be vulnerable and help them retain compliance with regulations such as PCI/DSS, HIPAA, SOX and more,” says Fake.

“By integrating our unique mainframe DLP technology with InfoSec’s extensive mainframe services and technology background, we feel that this creates a fantastic opportunity for us, says Michael Kibort, VP Business Development, Xbridge Systems, Inc.

For more information about InfoSec’s Audit and Compliance service and DataSniff, please contact InfoSec at 703-825-1202 or at sales@infosecinc.com.
